WILLIAM AMARO FINARDI

Software Developer

Porto Alegre, RS, Brazil · william.a.finardi@gmail.com · linkedin.com/in/william-finardi-819b21b7 · github.com/Proxyturn

PROFESSIONAL SUMMARY

Software Developer with professional experience in corporate environments, specializing in backend and full-stack development. Skilled in object-oriented programming, REST API development, and maintaining large-scale systems across industries such as energy, banking, and corporate services. Experienced in implementing new features, troubleshooting production issues, and maintaining systems with a focus on code quality and application stability. Works with modern frameworks, cloud tools, and agile practices.

Currently working with React, TypeScript, and C# in a team serving VCIMENTOS, CBA, and Votorantim. Solid foundation in backend architecture and enterprise systems development, enabling quick adaptation to Java-based environments. Pursuing postgraduate studies in AI Engineering.

TECHNICAL SKILLS

Languages: C#, JavaScript, TypeScript

Frameworks and technologies: React, Angular, Xamarin, Mendix, REST APIs, MVC architecture, SQL Server, Azure DevOps, cloud services

Concepts: Object-oriented programming, backend development, software architecture, debugging, system maintenance, agile methodologies

PROFESSIONAL EXPERIENCE

SEMANTIX (formerly ATOS) **Mar 2026 – Present**

Clients: VCIMENTOS / VPAR, CBA, and Votorantim

- Develop and support applications using React, TypeScript, JavaScript (Angular), and C# in a team serving corporate clients.
- Respond rapidly to incidents and work with SQL Server databases.
- Fix and optimize legacy systems, kiosks, and client applications in the cargo, trucks, and cement sector.

ATOS **Nov 2021 – Mar 2026**

Project: CEMIG / CPFL · Energy sector **Oct 2025 – Mar 2026**

- Supported the development team in corporate applications.
- Maintained production servers and processing queues.
- Reviewed code and oversaw deployment processes for testing and production environments.
- Maintained the stability of critical infrastructure systems.

Project: Alphaville **Feb 2025 – Sep 2025**

- Developed and maintained legacy backend systems, fixed bugs, improved applications, and implemented new features.

Project: Sodexo **Oct 2024 – Jan 2025**

- Developed and maintained applications using Mendix, contributing to feature evolution and system improvements.
- Collaborated with multidisciplinary teams.

Project: CPFL · Energy sector **Jun 2023 – Oct 2024**

- Developed new backend application features and built a kiosk application using Xamarin.
- Integrated applications with corporate systems and used Azure DevOps and cloud tools.

Frontend development **Jan 2023 – Jun 2023**

- Developed frontends using JavaScript and React and integrated them with backend services and APIs.

Project: Bradesco · Banking sector **Nov 2021 – Jan 2023**

- Supported and maintained corporate data flows using enterprise integration tools.
- Monitored systems and resolved issues.

Novus Automação **Oct 2019 – Oct 2021**

Intern / Tester / Developer

- Tested industrial products and software applications and assisted in developing internal tools.
- Created automation scripts and performed product data analysis.

EDUCATION

Postgraduate Studies in AI Engineering · UNIPDS (Anhanguera) **In progress**

Coursework: AI fundamentals, large language models (LLMs), retrieval-augmented generation (RAG), and building AI agents.

Bachelor's in Computer Science · UniRitter (Laureate International Universities) **Graduated June 2022**

COURSES AND CERTIFICATIONS

- Python Impressionador – 180 hours
- Acelera Atos Pleno – 80 hours
- Acelera Senior – 120 hours
- Desenvolvedor.IO – multiple backend-focused certifications
- English courses with Cambridge PET and FCE certifications

LANGUAGES

Portuguese: native · English: fluent · Spanish: basic
